

COMFORT AND CONSERVATION

Daikin AC's smart heating and cooling systems are crafted with individual comfort and global sustainability in mind. Our North American brands, VRV, VRV-S, SkyAir and Split Systems, fuse aesthetics, advanced technology and eco-friendly design into award-winning products for home and office that eliminate demand for oil and natural gas and reduce electricity consumption.

Daikin is an established world leader in heating, ventilation and cooling. Our diverse line-up of inverter-driven HVAC units optimize energy use while maintaining structural flexibility. Unlike conventional systems that reach a preset temperature and shut off, Daikin systems monitor ambient temperature and dynamically micro-adjust to minimize temperature fluctuations and sustain a comfortable living/working environment.

SUPERIOR TECHNOLOGY

INVERTER POWERED

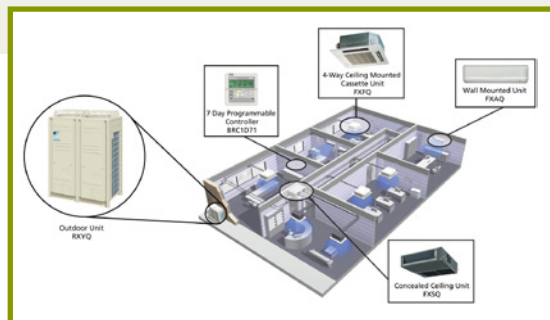

By avoiding the cycling, on/off operation of conventional compressor systems, Daikin AC's advanced inverter-powered units mitigate costly amperage spikes and can reduce overall power consumption by 30 percent. Start-up times shrink by a third when compared to typical compressor models.

R-410A REFRIGERANT

Daikin manufactures its own refrigerant—we are one of the few companies in the world to offer this kind of comprehensive heating and cooling solution. R-410A refrigerant exhibits low warming emissions potential and a short atmospheric lifetime. It does not deplete ozone. This high-performance formulation delivers both cost savings and environmental benefits.

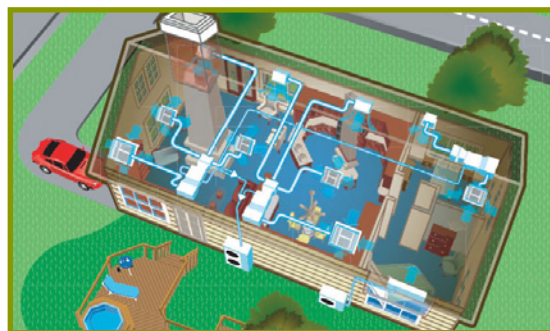

FLEXIBLE DESIGN

Daikin AC systems are available ducted or ductless, with fan coil mounting options for ceiling, wall or floor. Our control units are simple to operate and permit total building temperature management from a single location. Contractors, architects and engineers can deploy Daikin AC heating and cooling across a wide variety of residential and commercial applications.

HISTORY OF SUCCESS

Daikin AC's parent company, Daikin Industries Limited, has been developing progressive heating and cooling solutions for over 80 years. Our products are installed in countless homes and businesses across Asia, Europe and South America and we are listed in the 2009 Global 100 Most Sustainable Corporations in the World, revealed each year at the World Economic Forum in Davos, Switzerland.

PARTNERSHIP OPPORTUNITIES

Daikin AC seeks qualified North American architects, engineers, contractors and interior designers who wish to showcase the world's most innovative heating and cooling systems for their clients.
