

## EURUS ENERGY AMERICA CORPORATION

### COMPANY DESCRIPTION

Eurus Energy America has been deploying large-scale renewable energy solutions in the United States for over two decades. We currently generate some 590 megawatts in wind power alone. Eurus Energy and its Tokyo-based parent company are co-owned by Tokyo Electric Power Company and Toyota Tsusho Corporation, recognized global leaders in green power, with wind and solar installations delivering over 1900MW to consumers worldwide.

### PRODUCTS & TECHNOLOGIES

Eurus Energy's ambitious 180-megawatt Bull Creek wind farm in Texas came online in early 2009; it is our eighth American wind project and our highest capacity install ever, worldwide. Eurus has been pioneering wind power generation in the U.S. since 1987. Multiple Eurus wind farms deliver 250MW to customers throughout southern California, while the Crescent Ridge farm in Bureau County, Illinois and the Combine Hills site in northeastern Oregon generate 54MW and 41MW

respectively. Combine Hills II achieved commercial operation in December 2009 and added 63 additional megawatts to Eurus' impressive green energy portfolio.

### HISTORY OF SUCCESS

Eurus Energy America has recorded numerous industry firsts, among them:

- Introducing Mitsubishi Heavy Industries (MHI) wind turbines to the U.S. market in 1987.
- Building the first private transmission line exclusively for Qualified Facilities use, the 46-mile Sagebrush line in California's Mojave Desert.
- Being among the first wind power developers to implement tax equity financing.

Eurus Energy is committed to pursuing financially and environmentally viable alternatives to fossil fuel power generation in the new decade by nurturing a wide array of renewable investments through full-term development, joint ventures and mature development acquisition.
