

WINPRO Co., Ltd.

COMPANY DESCRIPTION

Winpro's renewable power solutions harness the energy of the wind and the sun to generate earth-friendly electricity for small to medium-scale municipal, commercial and residential applications. Winpro products deliver both high technology and superior aesthetics, the result of a design philosophy that embraces the natural environment. A Winpro green energy install on your property demonstrates your commitment to living in a no-net carbon world.

PRODUCTS & TECHNOLOGIES

Every Winpro wind power generator, hybrid-solar generator and green streetlamp features a supremely efficient vertical-axis, triple-airfoil design for stable power output at windspeeds as low as one meter per second. Our elegantly designed units are safe and virtually

silent, integrating into the urban landscape rather than detracting from it. Winpro power systems are generating watts across Japan, while our innovative wind-solar LED streetlamp models, LANCE, SAIL and CLUSTER, are illuminating busy neighborhoods in Tokyo, Nagoya, Shanghai and beyond.

Winpro oversees every aspect of production, from development and manufacture to sales and support. We are committed to reducing global warming and preserving the health of our shared planet throughout every stage of this process.

PARTNERSHIP OPPORTUNITIES

Winpro seeks to debut its green energy products in North America via a network of likeminded distributors, contractors and end-users devoted to pursuing alternatives to conventional fossil fuel-based power consumption.
