

## GROWING SUCCESS

Wood One operates on the principle that resource conservation and sustainable manufacture yields superior product. We maintain over 168,000 acres of New Zealand Radiata Pine forest on a 30-year cutting cycle designed to ensure quality timber and optimize the carbon sink capacity of our trees—Wood One’s forests absorb 1.3 million tons of CO<sub>2</sub> per year.

Harvested wood is processed locally at Wood One facilities throughout New Zealand. Manufacture is supported by biomass-generated electricity, which supplies more than half our power needs and mitigates an additional 516,000 tons of CO<sub>2</sub> annually.

Wood One’s commitment to quality and best environmental practices have earned the company numerous green certifications. We are both Forest Stewardship Council (FSC) certified and Forest Management (FM) certified. Our manufacturing facilities adhere to the FSC Chain of Custody (CoC) standard.

## HISTORY OF SUCCESS

- **1998:** All Japanese Wood One plants earn Total Product Maintenance (TPM) certification from the Japan Institute of Plant Maintenance.
- **2001:** Entire company becomes ISO 14001 certified.
- **2005:** Wood One’s 2004 corporate environmental report receives the Environmental Communication Award from the Global Environmental Forum.

## PARTNERSHIP OPPORTUNITIES

Wood One provides sustainable wood products to consumers across the residential and commercial spectrum. We seek to partner with green home designers, architects and builders as well as interior designers and contractors for residential, public and commercial applications.

## COMPETITIVE ADVANTAGE

### QUALITY PRODUCTS

Wood One’s centralized, integrated production model ensures precise quality control from forest to showroom. We control every stage of the process, from the harvesting of raw materials through manufacture and finishing, enabling shorter lead times and competitive pricing.

New for 2009, the solid wood louvered closet door represents the culmination of this production expertise and expresses Wood One’s unique ability to deliver sustainable, beautiful natural wood products at a price point that rivals composite and plywood.

### QUALITY OF LIFE

Eco-friendly solid wood helps create healthy living and working environments. Wood One has dramatically reduced the use of formaldehyde in manufacture and employs alternative resins, adhesives and finishes for low volatile organic compound (VOC) performance. We continue to research ways to reduce or eliminate VOCs and other unhealthful compounds.

Every Wood One product is California Air Resources Board (CARB) emission-compliant and satisfies the world’s most stringent emission requirements, maintained by the Japanese building code.
